

HanitaFirst BUILDING SURVEY Program

As the first step in our Five Step Plan, Hanita offers a type of Level 1 Audit at no charge that considers both your glass and your building.

YOUR GLASS

In order to improve the accuracy of our forecasted energy savings attributed to your investment in SolarZone window films, we endeavor to understand your existing glazing by measuring or estimating the following *and taking them into account in Energy Modeling*:

- Glass type and area by elevation
- Presence of existing coatings
- Shading – Overhangs and/or Fins
- Skylights

YOUR BUILDING

As a company committed to accuracy in forecasted savings, Hanita also takes into account these energy systems and resulting energy impacts prior to performing Energy Modeling:

- Location and weather data
- Building geometry and type
- HVAC System
- Internal Loads
- Building Construction
- Analyze 12-months utility bills

If you would like to receive a complimentary Building Survey, please complete the downloadable data collection form at www.hanitatek.com/_pdfs/HanitaTEK_EnergyPlus_EFILM.pdf
